## Count of app_id by id

5055

Average of rating by reviews_count

Apps with higher review counts tend to maintain a rating above 3.5, though some highly reviewed apps dip below 3, possibly due to recent negative feedback or quality issues. There is a positive but not perfect correlation between popularity and user satisfaction.

Average of helpful_reviews by developer

Some developers show higher average [helpful_review] scores, indicating their apps are not just highly rated but also found genuinely useful. Developers with high responsiveness (and apps with many reviews) may have better customer trust or community engagement.
